

Remote Dispensing System

Patient Care Wherever You Need It™

A proven solution designed to deliver faster and improved clinical outcomes for your 304B clinics.

As a 340B Covered Entity in the State of California, are you looking to stretch scarce Federal Resources as far as possible and extend your current pharmacy services to other outlining clinics? Would you prefer to avoid the full cost of setting up another pharmacy? Are you losing thousands of dollars a week in reimbursements for your 340B Eligible Patients to other pharmacies? Do you want to dramatically increase your capture rate?

If you answered "Yes" to any of these questions then we have the answer. The PickPoint® Remote Dispensing System.

With our turnkey and fully compliant solution, your covered entity can finally deliver the medications physicians prescribe to your patients in real-time and directly within your point-of-care facility. Your providers e-prescribe to your in-house pharmacy with specific coding indicating it should be dispensed by the RDS in the prescribing clinic.

You can rest assured that the PickPoint® Remote Dispensing System cabinet is the perfect vehicle to store and dispense 340B medications. It is reliable, safe, and secure. It has to be. The US government trusts it on many of its defense installations!

And, the PickPoint® Remote Dispensing System works with all major pharmacy management systems.

Call us today to review your prescribing records and build out a pro forma. Our team will also help guide your pharmacy staff through the licensing process with the Board of Pharmacy and help educate on the compliance details.

"The PickPoint® Remote Dispensing System has transformed our operation! Patients love the speed and convenience. We love the increased revenue from reimbursements."

Dr. David Gupda, ABC 340B
New York City
